

WASP^{V3}

WING ASSISTED SURF/SNOW/SKATE PROPULSION

WASP V3

The WASP V3 is an amazing all-round performance wing excelling in any condition and all disciplines.

It is lightweight, simple to set up and easy to use with improvements to the **power handles, de-power surf handle, windows, waist leash strap, canopy material and an updated size range**. From freeride cruising, wave riding, boosting air tricks, down winding or just starting out, the WASP V3 is ready to shred!

OZONE®

INNOVATIVE LEADING EDGE AND STRUT

Our innovative Leading Edge and Strut design provides a **stable airframe with minimal flex, delivering a solid, direct and well-balanced feeling.** This rigidity also helps develop power at low speeds to get you powered up and planing sooner. Our new overlap flat seam construction **improves sail control** resulting in an overall cleaner canopy.

OZONE®

NEW ERGONOMIC POWER HANDLES

New Ergonomic Power Handles on the Leading Edge and Strut feature an updated stiffer design to provide **maximum control and comfort**. The De-Power/Surf Handle at the front of the Leading Edge has been redesigned for **increased control when flying the wing single-handed** and features new soft knuckle padding for extra comfort.

OZONE[®]

INNOVATIVE PLANFORM AND TIP SHAPE

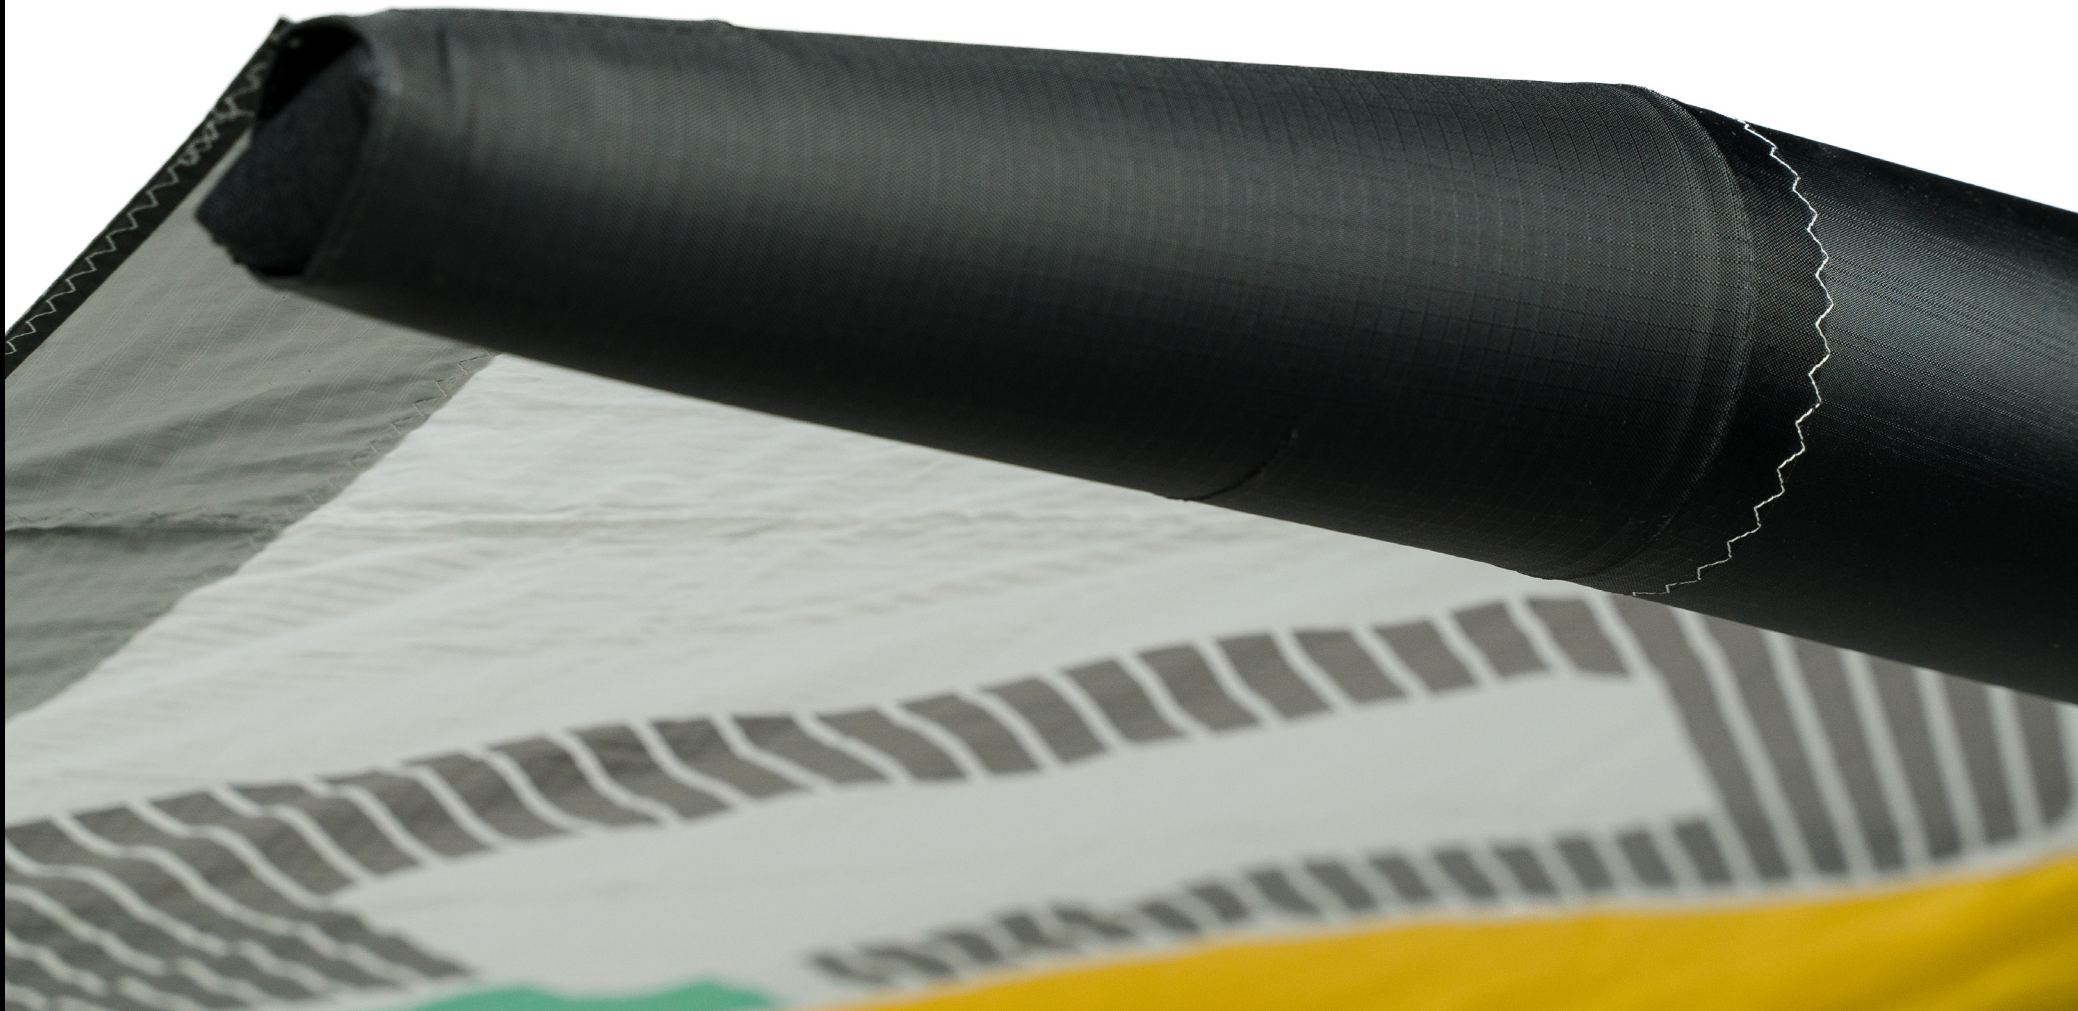

The **planform and tip shape** reduces interference with the water or ground.

INTEGRATED SCUFF PROTECTION

Lightweight durable scuff protection is integrated for riding on snow or land, although it is best to keep the wing off the ground at all times!

RIDE ANY TYPE OF BOARD

The **WASP V3** is suitable for riding any type of board on the water that has enough volume to support your weight. In strong wind conditions and with developed skills it is possible to ride with smaller volume hydrofoil boards. On the land or snow minimal wind is required to harness the natural energy to enjoy a different feeling of propulsion.

OZONE[®]

EASY TO INFLATE

Fast Flow Air Valves on both the Leading Edge and Strut makes inflation, deflation and packing a breeze.

OZONE®

FOAM PADDING PROTECTION

For the V3 we have updated the bag adding a **second adjustable shoulder strap plus double layer foam padding** for carrying a board and foil over the shoulder.

MYSTIC

OZONO[®]

BIGGER WINDOWS

Increased size windows on both sides of the strut provide safety for you and others around.

NEW TRIPLE RIP-STOP MATERIAL

The new triple rip-stop canopy material has an advanced coating to **increase strength, rigidity and durability** while improving feedback to the rider for a more direct feel of the wing. **The technical triple rip-stop dacron is super tough**, used on the Leading Edge and Struts it has superior strength and durability.

MODULAR LEASH SYSTEM

Our modular leash system can be customized for rider preference. The WASP V3 ships standard with a Waist Strap pre-attached to the Leash Line. The updated waist strap now includes an additional velcro closure running over the buckle to take stress off the buckle when highly loaded.

Leash system accessories (sold separately) are a velcro Wrist Strap or a Quick Release for use with the supplied Waist Strap or for connecting the Leash Line to a harness.

CONNECT WING HARNESS

For riders using a harness, webbing loops next to the strut Power Handles provide quick and easy installation of the WASP V3 Harness Line - a slim and lightweight design with an internal bungee contracting when unhooked to stay out of the way.

Combine with our new Connect Wing harness for the ultimate set up. Note: to use the WASP V3 with the Connect Wing Harness it requires our specially designed WASP V2/V3 Harness Line (sold separately). See the Wing Leash System and Harness Line PDF/video for further information.
